## Description

β<sub>3</sub><sup>®</sup> MU15 is a two way full range speaker adopting the new structure and new painting technology. It integrates one 15" Neodymium woofer with 75MM voice coil and one 3" compression driver. The rated power is 360W, the peak power is 1440W. Symmetrical magnet circuit design reduce the impact HD effectively and enhance the LF sound quality.

Neodymium transducers reduce 15% weight.

Cabinet is made of 15mm birch plywood with advanced environmental protection Polyurethane-based painting which is very rigid. The cabinet strength reach to 4500N. Q235 grille is coated by powder to provide strong ultra-Weatherability, can be used outdoors for 5 years. The backside foam of grille can prevent the rain.

MU15 adopts the protection free design, which reduce the interfere and enhance the sound quality.

A lot of new materials were used on MU15, for example, the diaphragm is made from magnalium to meet the sound requirement.

MU15 is mainly designed for conference room, multifunctional hall, auditorium, church, living performance.

## Applications

- Church
- Small Auditorium
- Conference room
- Small performance
- Multifunctional hall

Two NL4 connectors are available for amplifier connection. Paralelled connector is very convenient for another speaker connection.

## Speaker Testing Method

### 1. Frequency Response

Use Pink noise to test the speaker in the anechoic chamber, adjust the level to make the speaker work at its rated impedance and set the output power at 1W, then test the frequency response 1m away from the speaker.

### 2. Sensitivity

Use full range Pink noise which has been modified using an EQ curve to test the speaker in the anechoic chamber, increasing the signal to make the speaker work at its rated impedance and set the power output at 1W, then test the sensitivity 1m away from the speaker.

### 3. MAX.SPL

Use full range Pink noise which has been modified using an EQ curve to test the speaker in the anechoic chamber, increase the signal to make the speaker work at its maximum power output level, then test the SPL1m away from the speaker.

### 4. Rated Power

Use Pink noise to the IEC#268-5 standard to test the speaker, increase the signal for a continuous period of 100 hours, the rated power is the power when the speaker will show no visible or measurable damage.
